FROM CHAIRMAN DESK

I am very happy to know that Fabtech College of Pharmacy going to publish it's seventh Newsletter "Fabtech Pharma Newsletter" which reflects bimonthly updates of the academic, co-curricular activities and extracurricular activities of the staff and students of the college. We at

FCP conceptualize to train and bring out the best in the prospective pharmacist, keeping in view the focus and the direction as demanded by the trends in the pharmaceutical care sector by providing efficient infrastructure, laboratories, digital library for students and staff professionally skill full. We have also intervened in doing bit towards the society and have engaged in various health campaigns for the community through the enrolment of staff and students. With this aims at preparing the students as Pharmacists and making them aware of their rights and duties stipulated on moral issues based on pharmacy ethics and values. I wish you all the best for your efforts.

Hon. Shri. Bhausaheb A. Rupnar
 Chairman

FROM PRINCIPAL DESK

It is my privilege to publish the seventh copy of Fabtech Pharma Newsletter 2022. This year has been phenomenal in all the respects as well could add so many activities for the students and staff which were successfully completed and has brought the name to the department. The third copy published, will give the information related to academic, co-curricular activities carried out in last two months. Under the visionary and strategic guidance of our management we march in achieving a sustainable success. Our students, faculty and staff come together as a true community of scholars to advance knowledge overcome challenges to pursue their fulfilments. We believe that 'Education' is a wholesome, holistic exercise and as such we strive to give a whole new meaning to word.

What are Pharmaceutical Excipients?

There are several explanations to pharmaceutical excipients covering origin, regulatory and functionality aspects.

“The word excipient is derived from the Latin excipere, meaning ‘to except’, which is simply explained as ‘other than ‘.

Pharmaceutical excipients are basically everything other than the active pharmaceutical ingredient.

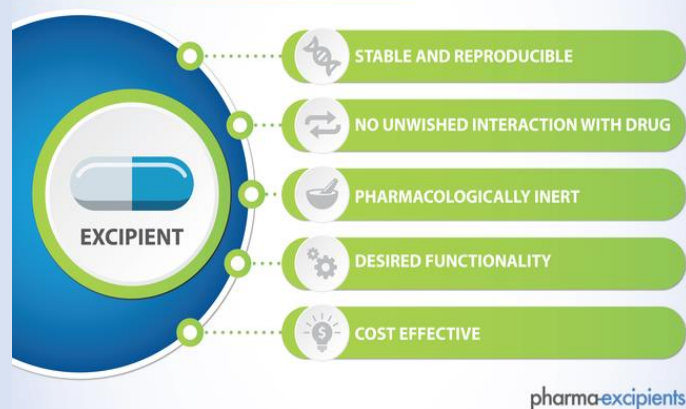

“Pharmaceutical excipients are substances other than the active pharmaceutical ingredient (API) that have been appropriately evaluated for safety and are intentionally included in a drug delivery system.”

Simply said the excipients enable the drug substance to be applied to the patient in the right form and supports the way and place of action without being active themselves.

Ideal Properties of Excipient:

Excipients range from inert and simple to active and complex substances that can be difficult to characterize. Traditionally, excipients were often structurally simple, biologically inert, and of natural origin, such as corn, wheat, sugar, and minerals. Many more novel and increasingly complex excipients have been developed as novel drug formulation delivery systems emerge and evolve. The inert and innocuous nature of excipients is no longer a given feature in drug formulations. Many excipients are potential toxicants at high doses in animals, though safe in humans at therapeutic doses, including commonly used excipients such as cyclodextrins, dextran, and polyethylene glycol.

IDEAL EXCIPIENT PROPERTIES

Apart from the physical and chemical properties it is important the excipients used are pharma grade excipients and comply with the current pharmacopeia's such as Ph. Eur (European Pharmacopeia), USP-NF (United States Pharmacopeia) and JP (Japanese Pharmacopeia). The pharmaceutical grade excipients production also requires the GMP level for excipients.

Roles of Excipients:

Excipients have different roles in a formulation. Some of the major ones can be:

- Aid in the processing of the drug delivery system during its manufacture.
- Protect, support, or enhance stability, bioavailability, or patient acceptability.
- Assist in product identification, and enhance any attribute of the overall safety.
- Assist in the effectiveness and/or delivery of the drug in use.
- Assist in maintaining the integrity of the drug product during storage.

BIMONTHLY COLLEGE NEWSLETTER

ROLES OF EXCIPIENTS

EXCIPIENTS HAVE DIFFERENT ROLES IN A FORMULATION. SOME OF THE MAJOR ONES CAN BE:

Categorization of Excipients:

Pharmaceutical excipients can be categorized in different ways. Such as:

By route of Administration:

- Oral Excipients
- Topical Excipients
- Parenteral Excipients
- Other Excipients

By origin:

Inorganic Chemicals

- Calcium Phosphates
- Calcium Carbonate
- Calcium Sulfate
- Halites
- Metallic Oxides

Organic Chemicals

- Carbohydrates
 - Sugars
 - Actual Sugars

- Sugar Alcohols
- Artificial Sweeteners
- Starch
 - Modified Starch
 - Dried Starch
 - Converted Starch
- Cellulose
 - Cellulose Ethers
 - Cellulose Esters
 - CMC and Croscarmellose Sodium
 - Microcrystalline Cellulose
- Petrochemicals
 - Glycols
 - Polyethylene Glycol
 - Propylene Glycol
- Povidones
- Mineral Hydrocarbons
 - Petrolatum
 - Mineral Waxes
 - Mineral Oils
- Acrylic Polymers
- Other Petrochemical Excipients
- Oleochemicals
 - Fatty Alcohols
 - Mineral Stearates
 - Glycerin
 - Lipids
- Other Oleochemical Excipients
- Proteins

These excipients are the most used in quantity but are under pressure by price and competition as different manufacturers are on the market with the same product / product types – at least based on the specifications given by the official monographs. Same might not be the same as the applied manufacturing process or different raw materials can have an effect on the excipient characteristics which is not reflected in the monograph testing. A well-known example is the different water uptake capacity of Microcrystalline Cellulose based on the drying process applied during production which can

have an influence in wet granulation or extrusion/spheronization.

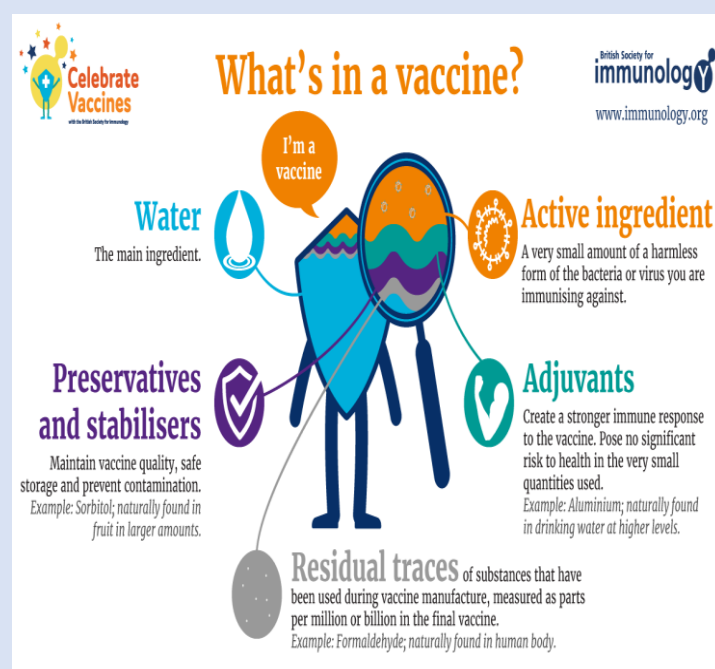

hesitancy to vaccination. Here we discuss questions about the ingredients found in a vaccine.

What are the Ingredients and Excipients in the COVID-19 Vaccines?

What's in a vaccine?

With the emergence of COVID-19, the crucial role that vaccines play in protecting our health has come into sharp focus. During this pandemic hope comes in the form of a vaccine and immunologists around the world are working to develop a vaccine that will protect us against infection by this new coronavirus. It's important to understand and address vaccine concerns that are prominent in public discussion and may lead to

Novavax COVID-19 vaccine (Nuvaxovid) ingredients:

One dose (0.5 mL) contains 5 micrograms of the of SARS-CoV-2 spike protein* and is adjuvanted with Matrix-M.

Adjuvant Matrix-M containing per 0.5 mL dose: Fraction-A (42.5 micrograms) and Fraction-C (7.5 micrograms) of Quillaja saponaria Molina extract.

Excipients
 Disodium hydrogen phosphate heptahydrate
 Sodium dihydrogen phosphate monohydrate Sodium chloride

Polysorbate 80

Sodium hydroxide (for adjustment of pH)

Sodium chloride

Water for injections

Janssen (Johnson & Johnson) COVID-19 vaccine ingredients:

One dose (0.5 ml) contains: Recombinant, replication- incompetent Ad26 vector, encoding a stabilized variant of the SARS-CoV-2 Spike (S) protein

Polysorbate-80

2-hydroxypropyl- β -cyclodextrin

Citric acid monohydrate

Trisodium citrate dihydrate

Sodium chloride

Sodium hydroxide

Hydrochloric acid

Ethanol

Water for injection.

AstraZeneca COVID-19 vaccine ingredients:One dose (0.5 ml) contains: COVID-19 Vaccine (ChAdOx1-S* recombinant) 5×10^{10} viral particles (vp)

*Recombinant, replication-deficient chimpanzee adenovirus vector encoding the SARS CoV 2 Spike (S) glycoprotein. Produced in genetically modified human embryonic kidney (HEK) 293 cells.

Excipients

L-Histidine

L-Histidine hydrochloride monohydrate

Magnesium chloride hexahydrate

Polysorbate 80

Ethanol

Sucrose

Sodium chloride

Disodium edetate dihydrate

Water for injections

mRNA vaccines by Pfizer-BioNTech and Moderna

Covid-19 vaccination has been a big topic and we were curious on the role of excipients in such formulations. Not surprisingly both Pfizer-BioNTech and Moderna (source FDA) have quite similar compositions: Active Ingredient, Lipids and a saline solution. Lipid (oil) "bubbles" are tiny bubbles of lipid
